Atrium Companies, Inc. Launches New Series 6000 Family of Products

New line provides high-quality options for builders in new construction market

DALLAS – Atrium Companies, Inc., manufacturers of Atrium Windows and Doors-branded products will preview its new Series 6000 family of vinyl windows and doors at the PCBC show May 30 to June 1 in San Francisco, **booth #N5717**. The Series 6000 family includes sliding glass doors, horizontal sliding, single-hung and picture windows, as well as special shapes.

The Series 6000 suite of products was developed to meet a specific need in the new construction market. "The products offer a new, all-welded vinyl program for new construction giving builders another price point in a vinyl line," stated Chris Reilly, director of marketing communications and replacement programs at Atrium. "The 6000 family is a value-add to builders looking for quality, cost-efficient options."

Series 6000 Product Details

The new Series 6000 single-hung window comes in a variety of configurations that can be combined with spacious picture windows and stylish transoms for a look of distinctive elegance. The Series 6000 single-hung has state-of-the-art engineering features offering high-performance and durability.

The single-hung model will be on display at the show and offers the following key features and benefits:

- Solid vinyl construction offering superior insulating value and low maintenance operation
- Fusion-welded frame and sash corners providing maximum strength and energy efficiency
- Double-pane (3/4") glass with warm-edge spacer for optimum thermal performance
- Removable bottom sash making outside panes quick and easy to clean
- Block and tackle balance system providing easy sash movement
- Interior compression glazing allowing glass replacement from the inside without special tools or skills
- 1" nail fin set back

Also available as part of the Series 6000 suite of products are the horizontal sliding window and the sliding patio door. The horizontal sliding window is an economical alternative to more expensive window designs that offer similar function and appearance. Rolling windows complement a variety of architectural styles with the added bonus of ventilation. Additionally, the sliding patio door offers a stylish and elegant slim design that provides exceptional value and comfort to any home.

Unique architectural enhancements such as specialty shapes and styles, as well as decorative grids are available options for all Series 6000 windows.

All of the products are crafted from premium, high-performance vinyl. Vinyl is the ideal material for engineering energy-efficient products that are both beautiful and practical. It's also easy to maintain and never needs painting or refinishing.

Thermal Efficiency and Energy Savings

Series 6000 products are engineered with high-performance glass technology to provide maximum thermal efficiency. This efficiency is achieved through premium insulated glass with two sturdy panes separated by an optimal air space to create a 3/4" panel.

Special insulated spacers are placed between the glass panes and designed to flex with the glass in hot or cold temperatures to resist seal failure. The insulated spacers also help keep the edges of the glass warmer, dramatically reducing condensation up to 80 percent while keeping cold air out and warm air in.

Additionally, low-E glass is also available as an optional feature with all Series 6000 products.

Limited Lifetime Warranty

Series 6000 products are backed by Atrium Companies Limited Lifetime Warranty to the original homeowner covering materials and workmanship from the date of installation. For more detailed information on the warranty please visit www.atrium.com.

All of the Series 6000 products are available through Atrium Windows and Doors – Arizona.

About Atrium Companies, Inc.

For more than 50 years, Atrium Companies, Inc. (atrium.com) has offered the highest quality window and door products to meet the demands of builders, contractors and distributors in the residential construction industry.
